ABSTRACT

Literature regardless of the style and manner of inscription is aimed to connecting the dots and prints of every research. In the review process, literature review strengthen the claim of the researcher on the topic of interest. Authors penned salient attributes in the structure of research literature: 1) establishing degree of persuasiveness, 2) the process of naming literatures for review, 3) provenance, 4) methodology, 5) value-driven literature.

Keywords: Literature review, Literature development, Issues of literature review

Literature regardless of the style and manner of inscription is aimed to connecting the dots and prints of every research. The scientific investigation, its endeavor of associating themes or conjugating patterns must first project the richness of literatures as it guides researcher to the succeeding notch. Similarly, the structural integrity of one's review of literature plays an essential fraction of the whole. Varying degrees may differ one work that of the other, but the well-endowed writing design(s) gives a *pleasant* fate of such work.

The researcher should critically pay attention to scrutinize research outputs or any scholarly papers. Structure should be structured depending on the intention of why the *Who* made the *What*? The summary of the concept(s) or topic of interest which underwent the investigation process is considered the focus of the review. Objectives should be named prior to commencing the *art* of writing the literature, since it serves as steering-wheel that continuously directs the hump.

In the review process, literature review strengthen the claim of the researcher on the topic of interest.^{(1),(2)} This explains how each work vary or share commonality in some other areas. Contrarian viewpoint is established in one hand to accentuate significant episodes of literature writing. There are those who fear whenever their findings spoke differently that of the literature. They further wanted that the results would be more or less brings portrayal of what had been written. Publication assures that such research precipitate equates the knowledge which is supposed to be the meat of author's labor.

Literature structures a stratum of work which themes and categories are identified. The layer explained the processes either convincing readers of the opinions developed, arguments trying to convert thinking minds or undertakings to imitate. Authors penned salient attributes in the structure of research literature.

1. Establishing degree of persuasiveness. This refers to the author's ability to convince readers about the exposed themes. Literatures are expected to convey meaning, and purpose. The aim should also be clarified to sustain consistency of thoughts and delivery of an end goal.
2. The process of naming literatures for review. This intends the reader to know about research and processes. Literatures are hardly identified, hence the objectives should be ruled out prior to consultation. Search engines are available to filter relevant and significant manuscripts for review. It is suggested that the researcher innovates mechanisms suitable or effective for the moment.
3. Provenance. It is important to note the history of ownership of manuscripts under review. Consider author's credentials, claims and even arguments. Evidences should also be identified as it stabilize the affirmation.
4. Methodology. Deliberate the process, strategies used in literature identification. The manner of identifying-gathering-analyzing data sources appropriate for the study. Research problems have to be answered at the end of the course. Sampling technique, size, types and description of collection are also considered. Included in this section is the efficiency, sufficiency of reported fro interpretation.
5. Value-driven literature. It means ethicality in doing research works. With numerous postulates adhering the ethical judgment, sound implication reflected in the literature review is entertained. Editorialize arguments and conclusions that ultimately bestows consequential or meaningful understanding of the subject matter.

Reflective stages in literature development

It is pivotal to cogitate structural presentations of literature review. As suggested, formulation of reviews are dependent on the different stages indicated below:
